WORKING PAPERS

Learning Risk Preferences from Option Portfolios

with Paul Schneider, Rohan Sen

We estimate the stochastic discount factor (SDF) by recovering the Sharpe-optimal nonlinear claim through a trading strategy in delta-hedged option portfolios and find that investor risk preferences, as revealed by the shape of the SDF, vary systematically across volatility regimes and progressively across option maturities.

Optimal Variance Swaps

with Paul Schneider, Rohan Sen

Profits from variance swaps, such as the trading strategy replicating the VIX, are problematic in an investment context. We estimate the option portfolio weights and the hedge ratios replicating variance swaps that are optimal with respect to the Sharpe ratio nonparametrically.
